PROFESSIONAL SUMMARY

Full-stack engineer with 3+ years of experience building production-grade MERN and Java/Spring Boot web applications. Specializes in scalable REST API design, JWT authentication, CI/CD pipeline automation, and cloud deployment on AWS and Azure. Proven ability to deliver high-performance, full-stack solutions using React.js, Next.js, Node.js, Spring Boot, Docker, and Kubernetes within Agile/Scrum environments.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+), HTML5, CSS3, TypeScript, C, C++

Frontend Technologies: React.js, Next.js, Angular, Redux, Tailwind CSS, Bootstrap, Material UI, Ant Design, shadcn/ui, Radix UI

Backend Technologies: Node.js, Express.js, Spring Boot, Hibernate, REST APIs, Microservices, Prisma

Databases: MongoDB, MySQL, PostgreSQL, Oracle, Supabase

DevOps & Cloud: Docker, Jenkins, Kubernetes, Git, GitHub, GitHub Actions, AWS (S3, Lambda, EC2), Azure

Additional Technologies: JWT Authentication, Clerk Authentication, Kafka, Redis, Socket.io, Multer, Axios, Formik, Yup, Bcrypt, MVC Architecture, Jest, JUnit, Unit Testing, Postman, Agile/Scrum, Maven, Gradle, Mockito, Spring Security, OpenAPI, Stripe/Payment Gateway Integration

AI-Assisted Dev Tools: ChatGPT, Cursor, GitHub Copilot, Claude

PROFESSIONAL EXPERIENCE

Software Engineer | *TixFix* | *tixfix.ai*

Jun 2024 – Present

- Contributed to the development of a production event ticketing and management platform supporting end-to-end customer workflows: event discovery, ticket purchase, QR-code ticket generation, and event check-in.
- Implemented and debugged ticket management features including printable/physical ticket flows, ticket resend functionality, and QR-code validation across frontend and backend layers.
- Built and integrated RESTful APIs using Spring Boot to support ticket inventory, attendee management, payment processing, and refund workflows.
- Developed responsive React.js UI components for organizer dashboards covering event management, ticket inventory, and attendee tracking.
- Collaborated on a modular monolithic Java/Spring Boot backend, applying layered architecture principles, input validation, and error handling across multiple feature areas.
- Participated in Git/GitHub-based team workflows including feature branching, code reviews, and collaborative debugging across the full stack.

Full Stack Developer (Volunteer Internship) | *NANC Community Platform* Feb 2026 – Present

- Built and maintained a full-stack community platform for a 501(c)(3) nonprofit, serving three user roles (public visitors, members, admins) via Next.js App Router with role-based route groups and layout-level auth guards.
- Architected a centralized API client with silent JWT token refresh, in-flight request deduplication, and domain-organized endpoints (auth, events, membership, reservations, donations) across 8+ feature areas.
- Designed and built an end-to-end facility rental reservation system: live space/pricing data, a multi-step application form with custom calendar and time pickers, and dynamic terms-and-conditions logic tied to per-space booking fees.
- Identified and fixed a critical authentication bug where mismatched role-string casing silently broke admin login, restoring access by aligning the check with the app's typed role model.
- Built a reusable UI library on shadcn/ui (50+ Radix-based components) with consistent design tokens and brand theming across public, member, and admin surfaces.

Full Stack Developer (Internship) | *Bitflux Technologies, Nepal*

Jan 2022 – Feb 2023

- Developed and maintained 30+ full-stack application features using React.js, JavaScript, and Spring Boot, contributing across the full SDLC.
- Built 20+ reusable React components, improving UI consistency and reducing frontend development time by ~30%.
- Integrated 10+ RESTful APIs to enable seamless communication between frontend and backend systems.
- Implemented responsive, mobile-first user interfaces with cross-browser compatibility, achieving ~95% Google Lighthouse performance scores.
- Collaborated in Agile/Scrum sprints using Git-based workflows, feature branching, and peer code reviews.

PROJECTS

Antic-Cafe — Full-Stack Restaurant Ordering & Operations Platform | *Next.js 16, Prisma, PostgreSQL (Supabase), Clerk*

- Built a production full-stack cafe platform with Next.js 16 (App Router), Prisma, and PostgreSQL (Supabase), supporting online ordering, table reservations, and dine-in tab management.
- Designed a role-based access control system spanning 6 roles (Admin, Waiter, Kitchen, Cashier, Driver, Customer) using Clerk authentication, a database-backed staff table, and route-level authorization middleware.
- Implemented custom Clerk auth flows (OAuth, MFA, email verification, password reset) — replacing default hosted UI with a fully branded, custom experience.
- Integrated Stripe, eSewa, and Khalti payment gateways; built operational dashboards for kitchen, cashier, and delivery with live status updates and an admin audit log for sensitive actions.
- Delivered customer-facing features including live order tracking, order history, discount codes, and an admin console with sales reporting and staff management.
- **GitHub:** github.com/Sushant9818/ANTICCAFE | **Live Demo:** anticcafe-9ch6.vercel.app

Suzuki Bike Management System | *React.js, Node.js, Express.js, MongoDB* Oct 2023 – Apr 2024

- Developed a full-stack bike and inventory management system using the MERN stack, serving admin and client roles.
- Implemented JWT-based authentication and role-based authorization, securing access for 2+ user roles.
- Built an admin dashboard with complete CRUD functionality for bikes, scooter parts, and inventory tracking.
- Integrated search and filter functionality, reducing product navigation time by ~40%.
- Developed 15+ reusable responsive React components using modern component-based architecture.
- **GitHub:** github.com/Sushant9818/Bikes | **Live Demo:** suzuki-bike-nextjs.vercel.app

Smart Scheduling System | *Node.js, Express.js, MongoDB* Apr 2023 – Sep 2023

- Built a full-stack scheduling platform matching therapists and clients based on real-time availability, reducing booking conflicts by ~100%.
- Developed 12+ secure RESTful APIs using Node.js and Express with role-based authentication and centralized error handling.
- Implemented conflict-free scheduling logic and optimized time-slot allocation for scalable multi-user access.
- Designed scalable backend architecture with MongoDB, following layered microservices design principles aligned with Spring Boot.
- **GitHub:** github.com/Sushant9818/SmartScheduling | **Live Demo:** smart-scheduling-eta.vercel.app

DHL Clone | *React.js, Node.js, Express.js, MongoDB, Socket.io* Dec 2022 – Mar 2023

- Designed a full-stack courier management system with real-time shipment tracking for 100+ mock shipments.
- Developed 15+ RESTful APIs using Node.js and Express.js to support complete CRUD operations.
- Implemented Socket.io for live shipment status updates, reducing simulated status refresh latency by ~80%.
- Built responsive React.js frontend with Redux state management and React Router navigation.
- Implemented JWT authentication, bcrypt password encryption, Multer file uploads, and Formik/Yup form validation.
- **GitHub:** github.com/Sushant9818/dhl-project

CI/CD Pipeline for MERN Application | *Docker, Jenkins, Kubernetes* Feb 2024 – Jun 2025

- Containerized MERN applications using Docker, reducing environment inconsistency issues by ~90%.
- Configured Jenkins CI/CD pipelines to automate build, unit testing, and deployment workflows, cutting manual deployment time by ~60%.

TRAINING

Java Full Stack Developer Training | *Thoth IT Training, Irving, TX* Nov 2023 – May 2024

- Trained in Java, Spring Boot, Hibernate, and enterprise backend development with layered architecture and microservices principles.
- Built frontend applications using React.js, Angular, HTML5, CSS3, and JavaScript; implemented CI/CD pipelines using Jenkins, Docker, and Kubernetes.
- Wrote unit and integration tests using JUnit and Mockito; applied authentication, session management, and production monitoring practices.
- Worked in Agile/Scrum team environments with collaborative workflows and sprint-based delivery.

EDUCATION

Bachelor of Computer Engineering | *Purbanchal University – Khwopa Engineering College, Nepal*

Jan 2017 – Nov 2022
